years. To him is justly due not only all the credit but all the profit that may accrue; and with this view they have determined to recommend to Council the adoption of a plan by which no more money will be expended than what the actual cost of the work will require. This cost, they think, can be kept within very reasonable limits. Should success attend the undertaking, it will then remain for Council to crown their own efforts in this inestinably great undertaking, as well as the labors of the operator, by voting him such a sum of money as they may deem justly due to such persevering and intelligent labor. GREAT REDUCTION IN PRICES may yet be permitted to crown his work with the success which seems so prominent. OFFICE CITY REGISTRAR,
CHARLESTON, January 20th, 1867.

To the Honorable the Mayor and Addermen of Charleston:
GENTLEMEN: The subjoined "Report," comprising
Mortuary and Meteorological Tables for the year ending
31st December, 1866, is herewith respectfully submitted
for your consideration and approval. These statistics
embrace a classification of the Causes of Death, Sex, Status, Ago, and Nativity of each case; together with Abstracts of the Barometer, Thermometer, Dew Point,
Winds and Weather at Charleston for the same period.
The decrease of mortality, as compared with the preceeding year 1865, is, doubtless, the result of an improved condition of the public hygiene, as well as the
large and timely accommodations for the sick poor, so
generously provided by the City authorities, aided and
encouraged by the United States Government, under the
auspices of the Bureau Refugees, Freedmen and Abandoned Lands for the State of South Carolina.

The ratio of deaths among the colored people is largely OFFICE CITY REGISTRAR, The Daily News. WATER SUPPLY FROM OTHER SOURCES. In connection with the Artesian Wells, I have been frequently impressed with the thought of another source of supply which, in my opinion, has a great deal to recommend it to the serious consideration of the City Council. DISEASES. SATURDAY MORNING, FEBRUARY 2, 1867. I mean the infiltrated portion of the rain water that ralls upon the earth's surface, showing annually a thickness of forty-three inches, and representing in solid measure about (160,000) one hundred and sixty thous nd cubic LEVY & ALEXANDER'S Ridney, Dis. of ...
CLASS NO. 8.
Diseases of the
Generative Sys-PROCEEDINGS OF CITY COUNCIL. about (160,000) one hundred and sixty thous nd cubic foct per square acre, equal to 1,120,000 gallons, the yield of each acre square annually. A portion is drained over the soil over certain impermeable layers, another is carried off by evaporation, and another portion again passes away by infiltration into the earth, at such depth as the parts composing the geological character of the surface formation will permit. Four-fifths of the water infiltrates and can be collected by water gardens. It is clear, therefore, were the city to purchase several square miles of land, five or six miles off (where the price of such now invites investment), the yield of water perfectly pure, from so extensive a tract, with properly constructed labor.
Twenty-five thousand dollars, it has been stated, is the lowest figure at which they could effect a contract. To the amount of five thousand dollars they were authorized to go. They now suggest that Council authorize them to expend that amount under their own supervision in car-Wholesale and Retail Clothing Establishment, THIRTY-THIRD REGULAR MEETING. COUNCIL CHAMBER, January 29, 1867.

Present—The Mayor; and Aldermen Ravenel,
Wragg, Gerdts, Small, O'Neill, Willis, Steinmeyer,
Olivey, Oaker, Honory, Frank, Willis, Steinmeyer, No. 275 KING STREET, Birth, Premature or spend that amount under their own supervision in carrying on the work, which they propose to do by providing the requisite machinery and employing Major A. C. Welton to conduct operations; such reports to be made, from time to time, as will keep Council theroughly posted up as to the progress and success of the work.

With these views, they propose for the consideration of Council the fo lowing resolutions, viz:

1. Resolved, That Major A. C. Welton be employed, under the superintendence of the Committee on the Artosian Well, to obtain the necessary engines, tools and machinery for the purpose of recovering the bucket now in the larger well, and that the experiment of endeavoring to remove it, under his direction, be made by day's labor, at the expense of the city. Convuls'ns, Puer-Wragg, Gerdti, Shair, Aston, Whilden, Cosgrove, Oakes, Honour, Enston, Whilden, Cosgrove, Butler, Earle, Courtenay and Pringle—eighteen.

The minutes of the last meeting were read and of A. F. BROWNING'S OLD STAND. doned Lands for the State of South Carolina.

The ratio of deaths among the colored people is largely ciminished, and this improvement can only be attributed to the thorough and efficient system of Hospital and Dispensary provisions above alluded to.

The apparent increase of mortality among the whites is only nominal as this number is a fair average for the left the years. The nominal in having been largely inperal.... Hem'age Utorine Peritonitis, Puer-peral... Uterus, Disease of land, five or six miles off (where the price of such now invites investment), the yield of water perfectly pure, from so extensive a tract, with properly constructed works, would be predigious—being for each square mile 640 times that for an acre as given above. The fissures and stratum of sand receiving the rain water so absorbed are very extensive, and the depth or thickness so considerable that they are ound even at the dryest seasons of the year to yield a very abundant supply, sometimes as much or more than a gallon per minute. These we know as springs, their situation frequently at a depth of two or three feet or slightly more, from the surface, and often in very undulating ground, as many as twenty feet. We find these fissures, from the very slight dip of their strike, discharging and issuing the abundant supplies into immense lagoons or lakes; and in many instances would be found, as to quantity, discharging from four to five gallons per minute. They are again to be seen in all the light cuts used as ditches at the side of pulle roads and railroad cuts of such depths, and more frequently and constantly in ditches, supplying from their sides the water that runs in the bottoms, and evidently showing that the water, which is invariably very clear, is brought there through the fissures by the process of infiltration, and cannot be regarded, therefore, as surface, which surface water in the dry seasons is not apparent, except after a shower.

These springs again, apart from the principle of absorption and infiltration on the earth, may be produced by the condensation of vapors rising up into the solid errust of the earth. The water from seas rivers and approved. The following matters were disposed of: applications of D. A. Amme and others for No. 1 Licenses, and G. H. Ahrers and others for No. 2 HAVING NOW OUR FULL STOCK OF WINTER GOODS ON HAND, AND HAVING JUST REDUCED OUR prices, we would call the attention of the citizens of Charleston and merchants in the country to this same, which we are prepared to dispose or at the cheapest and most reasonable rates in town. We have constantly on hand a large assortment of fine BLACK CLOTH FROCK COATS, FINE BLACK DOESKIN PANTS, OVERCOATS (of Uterus, Rupt're of OLASS NO. 10. Diseases of the Lo-comotive System. is only nominal as this number is a fair average for the last ten years—the population having been largely increased during the past year.

Our remarkable exemption from epidemic diseases—though threatened alike with Cholera and Yellow Fover during the past year—should excite the earnest and untiring endeavors of the public authorities to remewed vigilance and zeal, as well as inspire the hearts of our people with gratitude and hope—gratitude to Him who has so graciously delivered, and hope in Him who is the author of all our mercies.

Respectfully submitted. Licences. Referred to Committee on Licenses.
Application of Gaylord & Wagnon for license to

BOARD OF SUPERVISORS BÓARD OF SUPERVISORS
OF THE HIGH SCHOOL,
CHARLESTON, January 25, 1867.

To the Mayor and Aldermen of Charleston, in City Council:
Gentlemen: At a meeting of the Board of Supervisors of the High School, I was directed by the Board to communicate to you the following extract from a letter addressed to the Board by Mr. W. R. Kingman, Principal of the High School, and to ask City Council to authorize the expenditures necessary to carry out Mr. Kingman's recommendations. Drowning. LEVY & ALEXANDER. J. H. HONOUR.
H. B. OLNEY.
JOHN F. O'NEILL.
Alderman Wragg submitted the following report
of L. J. Barbot, Esq., Civil Engineer, &c., and requested that it be published for general information; which was so ordered: Murder ANNUAL REPORT OF THE CITY REGISTRAR, FOR Neglect...... Suffocation.... P. S. Being desirous of closing out our stock of BOOTS and SHOES, we offer them to the public strates that canno THE YEAR ENDING DECEMBER 31sr, 1866. be surpassed in town.

P. S. Mr. F. C. MILLER would be happy to see his friends again at the above place.

December 18 CLASSIFIED CAUSES OF DEATH. ESTABLISHED 1825. These springs again, apart from the principle of absorption and infiltration on the earth, may be produced by the condensation of vapors rising up into the solid crust of the earth. The water from seas, rivers and lakes, perculating through certain strata of earth at the same leval, and forced into the earth by the pressure of the water itself, and the leat nearer the earth's centre converts it into vapor, which rises, and when near the surface is condensed in the several fissures, and in that condensed state, forming not only the source of jetting wells or "Eaux Jaillissantes," but frequently adding to the volumes of springs near the surface; and passing out from these springs to the surface; and passing out from these springs to the surface it becomes again separated, as before explained, i. e. clouds, surface water and springs.

Now my line is, that very many, probably 200 to 300 of such springs, which can be clearly seen in the various forms that I have attempted to explain, can, after making proper researches and soundings for them, by surveys properly conducted, and with a proper system of levels connecting the entire survey—the levelling being done to show their elevations with our bonch marks it Charleston, so as to determine their use; the distances all to be measured, and the operations showing their localities all mapped out—they may be collected together, forming several large reservoirs, at a short distance from the city, and, by means of proper supply pipes, be brought into the city and distributed.

Please look to the city of Augusta, for very many years, and still so to-day; all her supply of water—the most wholesome in the entire State of Georgia—was obtained from a small lake at the sand hills, about three and a half miles from the city, and is due to the surgested.

I do not propose for this purpose to go beyond ten miles from the city, and still see no reason why not go fifteen miles, if our researches he rewarded by securing a bountiful supply of wholesome water. The springs that feed the s THE ARTESIAN WELLS AND WATER SUPPLY FROM recommendations.

[EXTRACT.]

"I desire to report that suitable blackboards for the School will cost about ninety dollars (\$90). The boards will be placed on movable and sliding frames, and will accommodate five boys in each department. Mural maps will cost about one hundred dollars (\$100). Philosophical apparatus can b. procured for about two hundred and firty dollars (\$250). I need two chairs to supply the German master, when elected; one for his Recitation Room and one for his place in the Chapel. The stage in the Chapel barely accommodates the present corps of teachers. It ought to be enlarged."

Very respectfully, your obedient servant. OTHER SOURCES. DISEASES. DR. WM. T. WRAGG, Chairman Committee of Council on DR. WM. T. WRAGG, Chairman Committee of Council on Artesian Wells and Water Supply:

DEAR SIR:—The importance of the above subject requiring much time, and patient and laborious study and research, I am not able to present it in the extensive light which I contemplated, before Council, in all the arguments and details of science and practice. It is but five days since I had the pleasure of a conversation with you in the matter, and with many and frequent interruptions. I am forced to limit myself in its discussion, hoping, however, at some future time, to be able to present the matter in the form of an enlarged report on the following points: Totals....: 192 129 147 129 114 91 77 93 72 62 57 67 THOMAS J. The following communications were read:

CHARLISTON, January 23, 1867.

To the Honorable the Mayor and Attermen:

GENTLEMEN:—The Fire Well at the corner of Smith and Beaufain streets being entirely useless, the Board of Fire Masters request your honorable body to allow them to advertise for estimates for repairing the same.

I am also directed to hand you the accompanying report of the Chief, and ask your favorable consideration of it. The resignation of Mr. J. M. Pundt having caused a vacancy in the Board, Mr. J. C. E. Richardson has been nominated to all the same. Very respectfully,

B. M. STROBEL, Clerk and Sup't. Diseases of a General or Uncertain Seat. totally unsuitable to the section of bore of well. Since, from want of time, I cannot onter into the dis-cussion of the above points in the desirable detail. I shall limit my observations to the leading subject. Since, from want of time, I cannot such that the cussion of the above points in the desirable detail. I shall limit my observations to the leading subject.

It has frequently been a subject of inquiry whether any researches in way of soundings and levels have been made since the boring of the old well, in order to trace the various geological formations found in the excavations of this well, to the upper range of country, said range averaging in elevation say twenty-five feet above the present bench mark of the well. Such a record, did it exist, would be of great value and great aid in all future operations on the subject of wells. Its importance is, that such positive information establishes the fact of the supply of the well, whether the fissure supplying it is unlimited or constant—which information, in point of fact, is the datum upon which the further prosecution of the new well is to be decided, and the expanditure of thousands of dollars made. I presume that this information has been satisfactorily obtained; and judicing from the results set forth by the very able, scientific and experimental report submitted by the Committee appointed by Council in 1858, I find the strongest argument for success. Their report has very clearly demonstrated that there is no reason to doubt the successful result of the work, and the extreme nicety in which the calculations made are supported by the experiments, even to the decimal of hundrelts of a gallon, go to show that some care was taken in formor researches; and assuming this to be so, the strata having been traced to the upper levels of country, establishes the principle by which the movable strata of the upper section exert great influence upon those of the lower—and (as I shall show by the consequence) it is therefore much to be regretted that the prosecution of the operations on the new well was discontinued at that time, promising such graud re-No. 52 SOUTH STREET, Totals . . . | 30 | 35 | 39 | 63 | 54 | 62 | 68 | 54 | 76 | 63 | 32 | 30 | 606 orgestion..... Nos. 5, 7, 8 and 9, are all that now compose the part of the Department.

No. 5 Engine is in good working order; has 400 feet of hose, most of which is in very bad condition. The suction hose is in very bad order; has est ordinary.

No. 7 Engine is in good order; has 350 feet of hose in bad condition. Suction hose bad; reel ordinary.

No. 8 Engine is in good playing order, and requires some repairs; has 250 feet hose, in bad order. Suctions bad; hose reel ordinary. CONSTANTLY ON HAND AND ATTOWEST PRICES. pilopsy..... Meningitis.... Paralysis.... spina Bifida.... Spine, Discase of... Bacon is steady and fairly active. Sales of 138 bores Cumberland cut at about 10%c, and 250 do, seller Fabru COMMERCIAL. Cumberland cut at about 10%c, and 200 do, senser Bearvary, at 10c.

Dressed Hogs are firmer. We quote at \$%a9% cts for western, and 10a10%c for city.

Lard is without important change. Sales of 650 bbis and tes at 19%a19% for city; 19%a19 for that to prime steam, and 13%a13%c for kettle rendered.

Coffee—Rio is in good demand and prices are firm.

Other styles are fairly active. The Charleston Cotton Market. l'rismus Nascentium... LOUIS J. BARBOT. Alderman Wragg prosented the Weekly Reports of the Keeper of the Tidal Drains, for the week ending 28th inst., which were received as inforbod; hose reel ordinary.

No. 9 Engine in good order; has 200 feet of hose in bad order. Suctions bad; reel ordinary.

The men who compose these four companies are colored, and are orderly and well behaved, and attend to their OFFICE OF THE DAILY NEWS, CLASS NO. 4.
Diseases of the Respir The market continues depressed and downward tendtory System. Asthma..... Dronchitis..... 132 129 147 123 114 91 77 93 72 62 67 67 1164 ng. prices being irregular, but in most cases about %c. ed, and are orderly and well behaved, and attend to their duties without trouble.

In my last annual report I recommended the abandonment of these companies, believing we could dispense with them on the ground that their services would not pay the expense incurred to maintain them. The introduction of six steamers, and a seventh being about to be added to the Department (two of which are in the Upper Wards), has caused me to alter my opinion on the subject of abandoning the four ward engines. For the Lower Wards they will be of little use. I would recommend that Nos. 5 and 7 be placed in the Upper Wards, and, in connection with Nos. 8 and 9, not to be used in the Lower Wards, except in cases of emergency.

To carry out these suggestions, if agreed to by the City Council, it will be actually necessary that each one of the above engines be furnished with 400 feet of new hose, and 21 feet of new suction hose. The present condition of their hose and suctions render their services but of little avail at fires, and does not compensate for the expense. CONTON—The market to-day is steady at the improve-ment of yesterday. We quote Midding Uplands at Ma-84%c, and New Orleans and Texas at 35%c. MOLASSES—Is in fair demand, and prices are well susthe consequence) it is therefore much to be regretted that the prosecution of the operations on the new well was discontinued at that time, promising such grand result as set forth by the labor of your Committee; it is particularly to be regretted when we find that the boring had reached a stratum of morable os quick sand, for in this sixts of such works and character of strata, the only faithful operations are those which are vigorously prosecuted, and the many advantages of an energetic and persevering labor invariably reward the engineer in overcoming a troublesome material in such construction, and in the economy of a great deal of time, labor, and consequently money. Delays in all cases of the kind are attended with a change in the position of the tubing passing through this stratum, and an improper lodgment not only of the tube, but also of any broken fragment of the pressure and influence of a strong outside and abundant current. This sand, on account of the quantity of water incorporated with it, and aided by the pressure of a mass of the same material outside of the tubing and stratum of the same material outside of the tubing and stratum.

A "Bill" to define the rights and privileges of street railroads, &c., came up for its second read-30%c for Middling.

TAR—No transactions occurred. COMMERCIAL ATTARES IN CHIEF.—The Daily News city article says: Telegrams from China, dated, the 15th alt, make no reference to the prevalence of a mercantile panic, as was rumored in London a few days ago, but contain the satisfactory information that Dent & Co were prepared to take up the bills, amounting to about £30,000, which were refused acceptance in Rovember last by their London agents, Dent, Palmer & Co.

The Times' city articles says the talegram from Houg Kong announces that Dent & Co have been enabled to provide for their drafts, which were refused acceptance by their London correspondents at the beginning of Nov. last, through the assistance of Jardine, Mathieson & Co., and others; a result which will greatly bind to restore confidence in this branch of commerce. It is coffed that title busines of the house is going on as usual. The market itoms by the present opportunity are to the effect that silk was rather lower with a small business, and that in tes also the transactions were limited and the shipments on a reduced scale.

Bombart, January 2.—Cotton firm but quiet. Dhollerah 230r. Goods unchanged. Exchange is 11%d. EAST INDIA MARKETS. I shall reply, it can be removed; but not by any outside pressure from the surface, or from any mechanical force applied upon its column within the tubing—for, to admit this idea, would be to admit—

1st. The possibility of compressing quick sand and water incorporated in a mass or separately.

2d. That from its capubility of compression, as a mass at the bottom of the pipe, and at that depth and in the entire length and direction of its layer, it would then give room to let the material in the tables. The communication of the Supervisors of the High School, which was laid over in the early part f Western at \$3 12); per bushel.
CUTFON—With more favarable advices per cable from iverpool the market clo-ed firmer; sales to-day of midling Uplands at 34 cents; some held still higher. On motion, the 18th rule was suspende the Commissioners authorized to proceed with the work. The election of officers approved. tive System. Femur, Fracture of. 515 58 88 87 75 55 55 of the meeting, was taken up.

Alderman Itavenel moved that the Principal of the High School be authorized to procure such articles as are enumerated in his letter to the Supervisors. Adopted. The following communication was read and aplength and direction of its layer, it would then give room to let the material in the tabing, occupy its position at and outside the tabing at that dopth. But I do not admit it, and experiments prove the incompressibility of quick sand and water to be a law of philosophy, therefore this idea of compression will not do. Then what must we do? We must resort to the principle of exhaustion; we must remove the water, and with it the sand, but in all cases of operation the water first, and faster than it accumulates by perculation, and by so doing we reduce the sand to a more solid mass, and can better work it. We must labor with peculiar shared External Causes. CHARLESTON, 21st January, 1887. 4558888886555 ticles as are enumerated in his letter to the Supervisors. Adopted.

At this stage of the proceedings Alderman Honour presented the following petition, and offered the following resolution, which was adopted:

To His Honor the Mayor and the City Council:

Gentlems: The undersigned, Ministers, in behalf of a large number of destitute and respactable ladies residing in the city, most respectfully petition your honorable body to allow them the use or loan of the upper portion of the building known as the "Work House," in Magazine street, for the purpose of preparing a home for this distressed portion of the community. Owing to the calamities of war, and the incident high rents, as also to the large burnt district in the city, your petitioners are paintfully sensible that many aged and deserving females, once in better circumstances, will be bitterly exposed to the riger of winter and the stringoney of the times, unless some relief is promptly afforded. Your potitioners have in value searched for a suitable building to afford partial shelter for this large class of helpless women, and now turn to your honorable body with the hope that you may be able to aid them.

Your petitioners do not propose to disturb any plan of Council with regard to the basement of the building, but only ask to be allowed to refit, if practicable, the upper story into commodious and comfertable apartments for some of the most indigent and respectable ladies of the community. Nor do they solicit any appropriation from Council, either for refitting the building or the support of the occupants, but propose to throw the whole enterprise on the benevolence of the community.

Your honora-le body is apprised that the building is badly mutilaled, and is sinking into decay, and you will discover that this proposition will at least preserve the property, and thereby arrest a large outlay to the city, To the Honorable the Mayor and Attermen of Charleston:
GENTLEMEN: At a recent election, held by the Commissioners of the Charleston Orphan House, the following named persons were selected to furnish supplies for the ensuing year, in accordance with their respective offers, Coup de Soleil..... 480503128528 | Hottest Day. 의용당당고등등으움등 © | Coldest Day.
